Quayle Action: Objections

1. This application is in condition for allowance except for the following formal matters:

Claim 8 depends from cancelled claim 1.

The drawing filed on 8/8/2005 are not accepted. The Applicant has left out reference number "T4" and lead frame "8" and gate pins G4-G6 as disclosed in the specification on the bottom of page 4.

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the lead frame being rotationally symmetric (U phase has an additional lead line extending radially outward from the lead frame, the lead frame adapted for direct electrical connection of the electrical components (claims 3, 4, and 6-13), the bent and stamped parts of the lead frame (claim 8), the support component between the electronic components and the lead frame (claim 10), the support between the lead frame and the components being a heat sink (claim 11), lead frame mounted to the front of the housing with connection wires to the phase windings (claim 12), and the support device held by a multiple part motor housing (claim 13) must be shown or the features canceled from the claims. No new matter should be entered.

The specification does not include a description of reference number 8.

The Specification page 5, line 5, the rotationally symmetrical tracks are 12, 14, and 16, therefore replace "18' " with --16'--.

Art Unit: 2834

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance: the prior art does not teach an electric motor having a lead frame for connecting electronic components for driving the electric motor, where the lead frame is located at a front end of the electrical motor and has tracks for connecting the power supply wires and the phase windings of the electric motor, with the tracks being adapted for direct electrical connection of the electronic components; wherein the lead frame is of a rotationally symmetrical shape and the electronic components on the lead frame are arranged in a rotationally symmetrical manner so that the length of the connection wires from the phase windings of the electric motor with the tracks of the lead frame is minimal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2834
